SKORI · SKORIAPP.COM

Scan a barcode. Get a straight answer.

A food and cosmetics scanner built for Saudi Arabia: a 0–100 score, the grade behind it, and exactly which ingredients moved the number — in Arabic and English.

Malek Salem Alrashidi Establishment · Jeddah, Saudi Arabia · CR 7052479446

October 2026

THE PROBLEM

Shoppers can't read what is in their food and skincare.

Labels are hard

Ingredient lists use E-numbers and INCI names that most people cannot judge in a store aisle.

Saudi products are missing

Global scanner apps are English-first and do not cover many products sold in Saudi Arabia.

Scores without reasons

A number alone is hard to trust. People want to see why, and where the evidence comes from.

THE SOLUTION

Scan → score → see exactly why.

Food

Nutrition scored with the 2023 Nutri-Score method, adjusted per category · every additive named with its risk tier and evidence · NOVA processing level · allergens from the ingredient list.

Cosmetics

INCI ingredient concerns with their sources (SCCS, CIR, IARC, PubMed, EU Cosmetics Regulation, SFDA) · leave-on vs rinse-off exposure · position on the label counts · contested ingredients stay visible.

AI assistant

Ask about any product: why it got its score, or what an ingredient does. Answers use the same sources as the score.

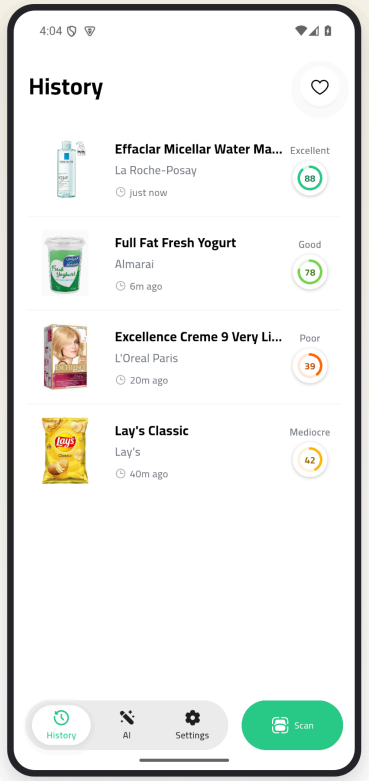

Honest by design

"Not rated" when a product can't be fairly graded. Skori takes no money from brands or food companies.

THE PRODUCT

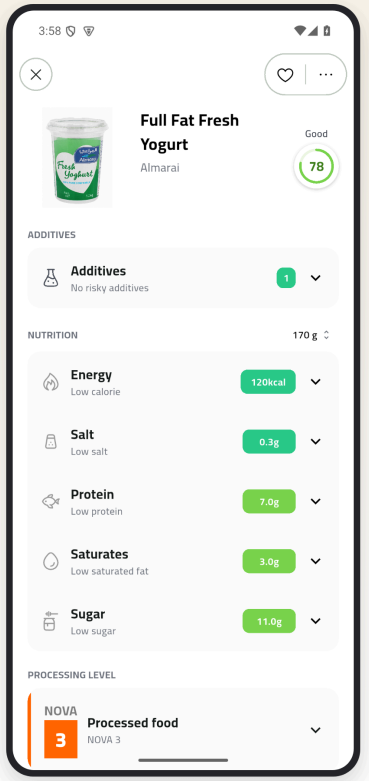

Every product, scored

Food and cosmetics, in one history

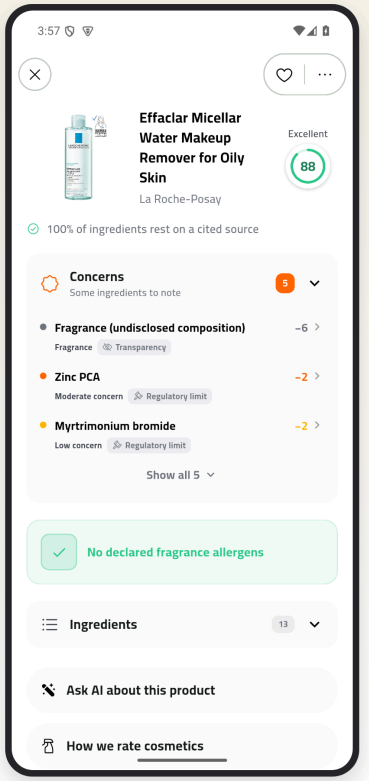

What's behind the score

Nutrition, additives and processing — explained

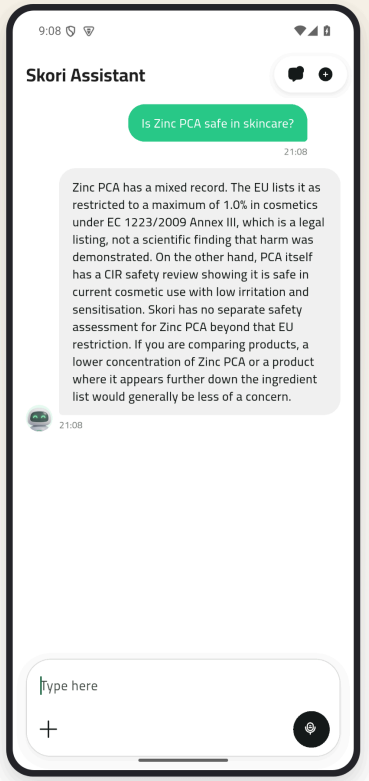

Now your skincare, too

Ingredient concerns, with the sources

Ask about an ingredient

Answered with the source behind it

TRACTION · LIVE SINCE 18 MARCH 2026

Early, real, and growing.

54k
products in the database
(21,843 food + 32,137 cosmetics)

346
user accounts
(197 registered + 149 guest)

57
monthly active users
(last 30 days)

5.0★
App Store rating (9 ratings, Saudi store)

111
sign-ups in June 2026 (peak month)

v1.2
current release, Oct 2026 — food + cosmetics

Firebase + App Store data, 28 Oct 2026. Counts include a few test accounts.

MARKET & EDGE

Built for Saudi Arabia first.

- **Arabic-first**, fully localised right-to-left, with Saudi products and Saudi regulations (SFDA).
- **Transparent sources** behind every flagged ingredient — trust is the product.
- **Catalogue grows with users:** scan something we don't have, send the label, and it is added.
- **Next markets:** the Gulf and other Arabic-speaking countries, where the same gap exists.

TECHNOLOGY & AI

How Skori uses AI — and where GPUs come in.

Today

Flutter app (iOS + Android) · Firebase on Google Cloud · Claude API for the assistant and label analysis · OCR / vision for ingredient labels · embeddings for ingredient and product matching.

Next, on NVIDIA GPUs

Open-weight vision-language and OCR models for Arabic + English labels · embedding models for matching · batch jobs over the 54k-product catalogue (extraction, normalisation, re-scoring) · NVIDIA NIM / TensorRT for low-cost inference.

Business

- Free today, focused on growth and trust.
- Bootstrapped: $0 raised, no investors.
- Independent: no money from brands or food companies.
- Member of Claude for Startups (Anthropic), Oct 2026.

Team

Malek Alrashidi — Founder & CEO, sole developer. Designs and builds the product: the Flutter app, the Firebase backend, the scoring methods and the AI features.

Software Engineering student, University of Jeddah.
